

Distribution of ego out-degree at time of adoption (TOA)

n_adopters = 828 median = 2 mean = 2.30

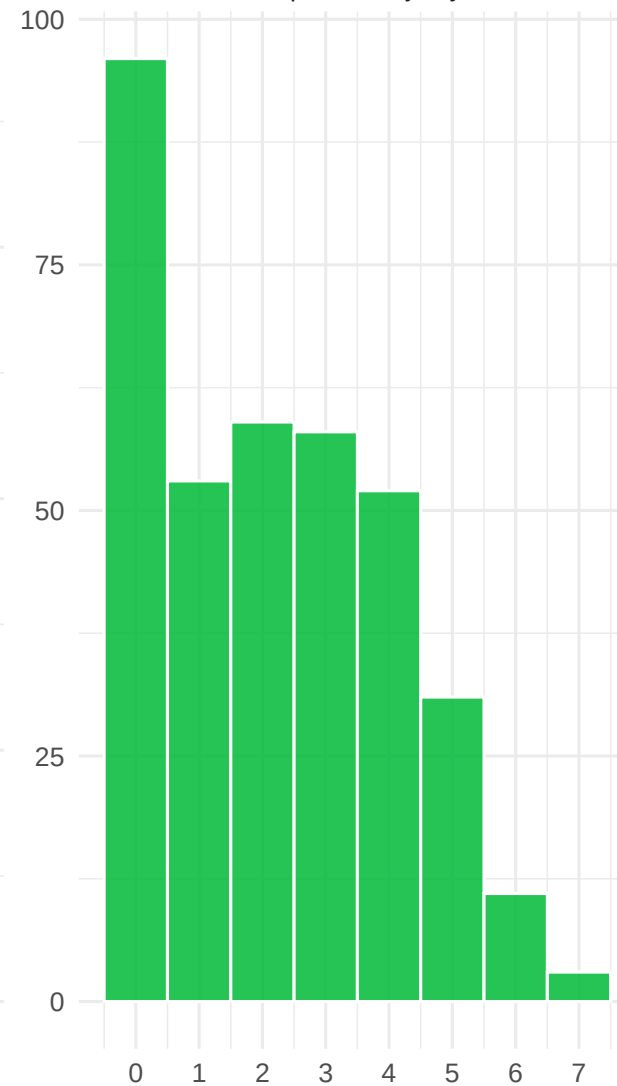

Out-degree at TOA – by school type

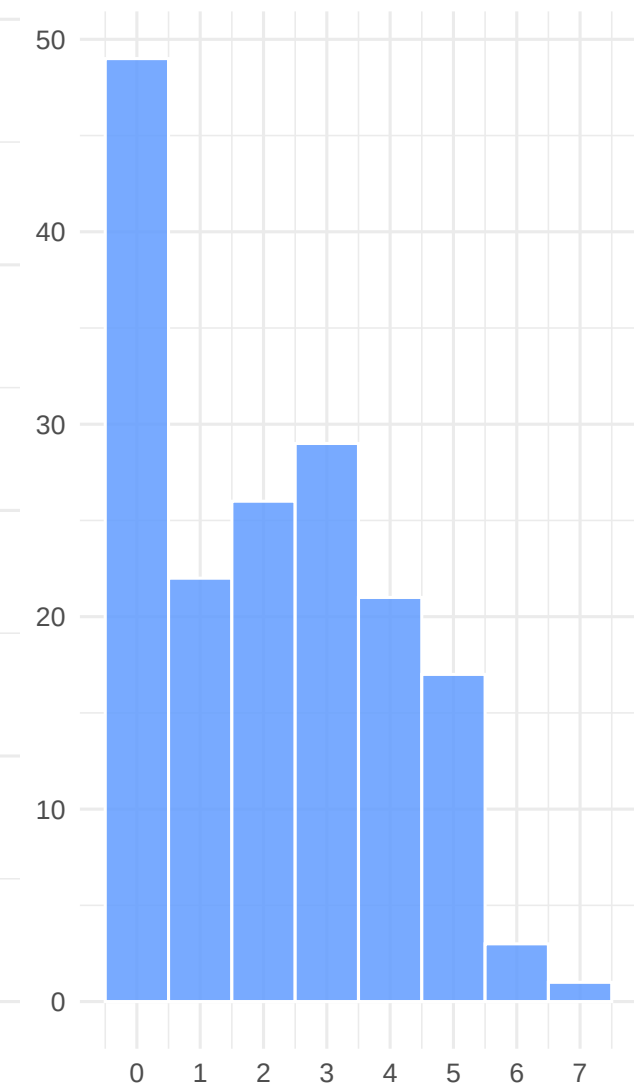

Asian-majority

Hispanic-majority

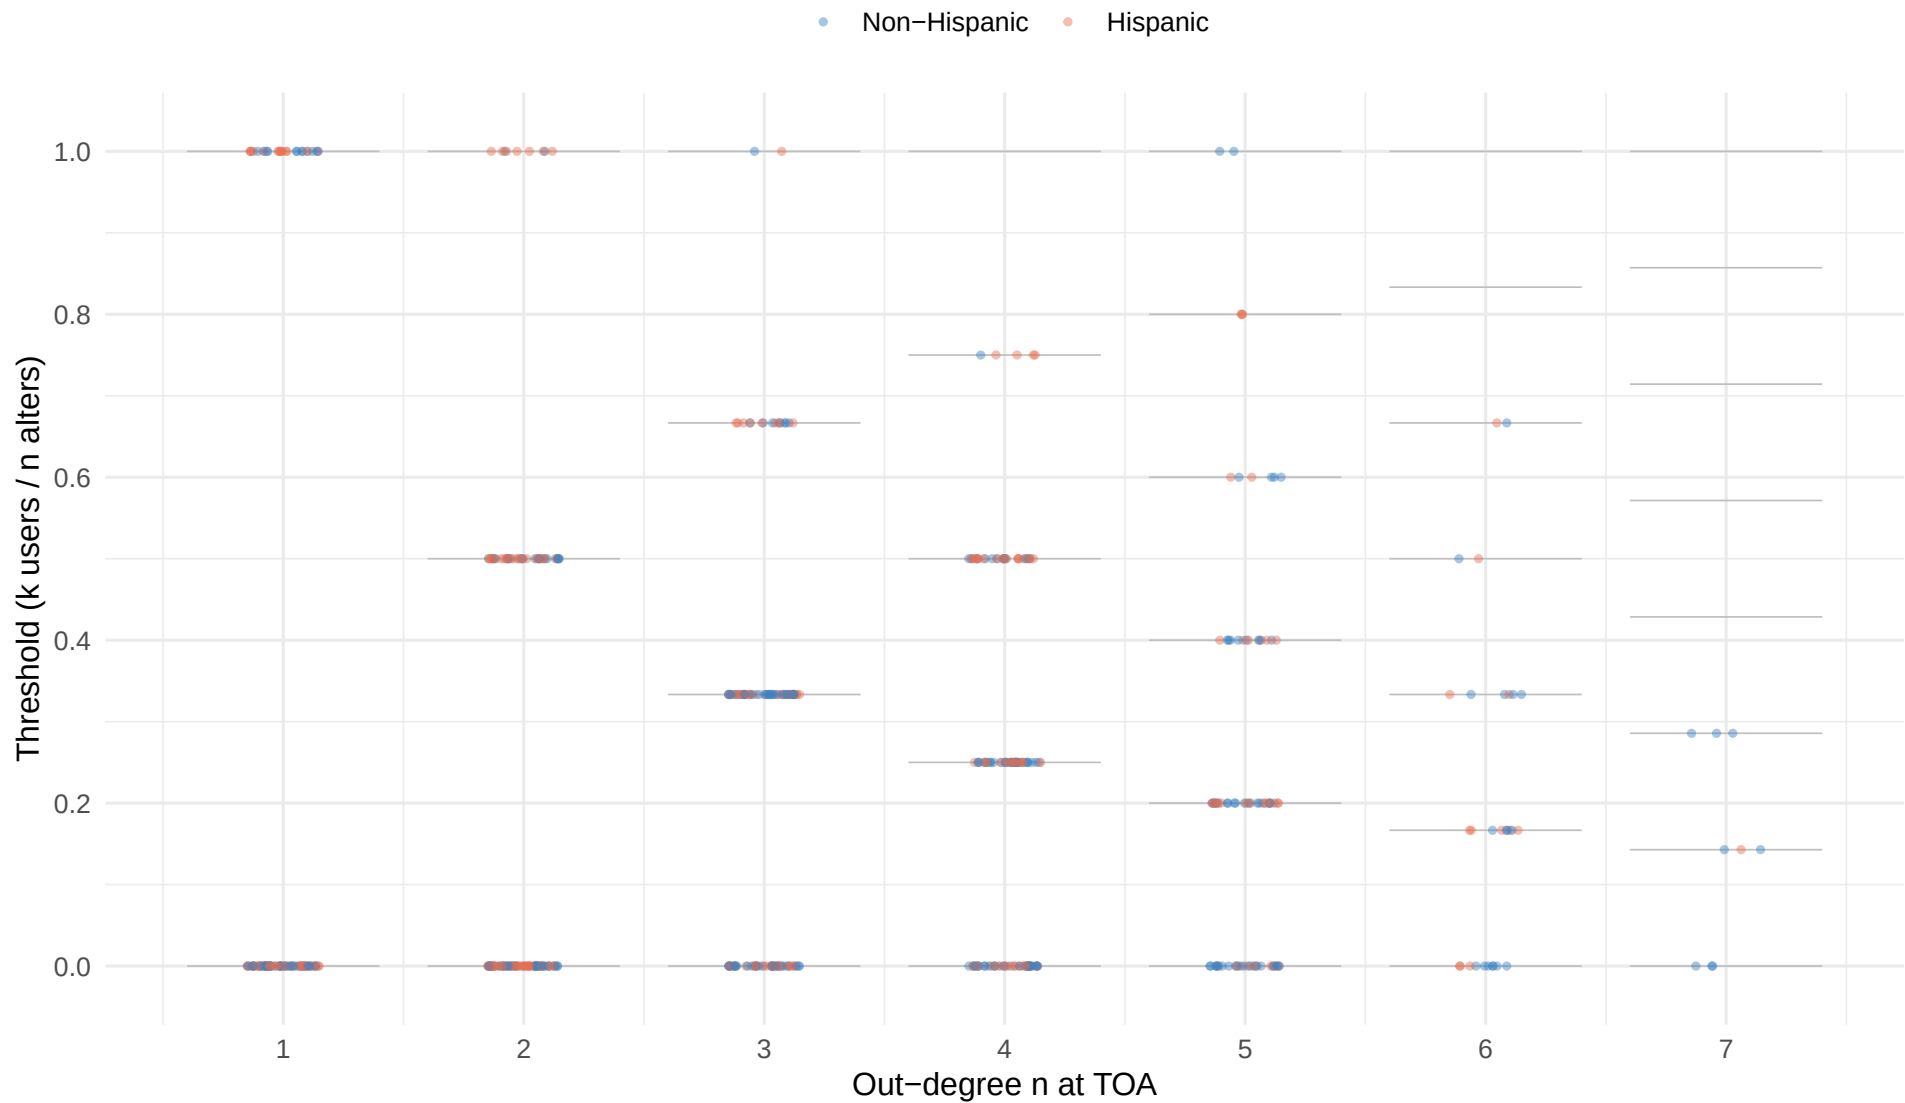

Other

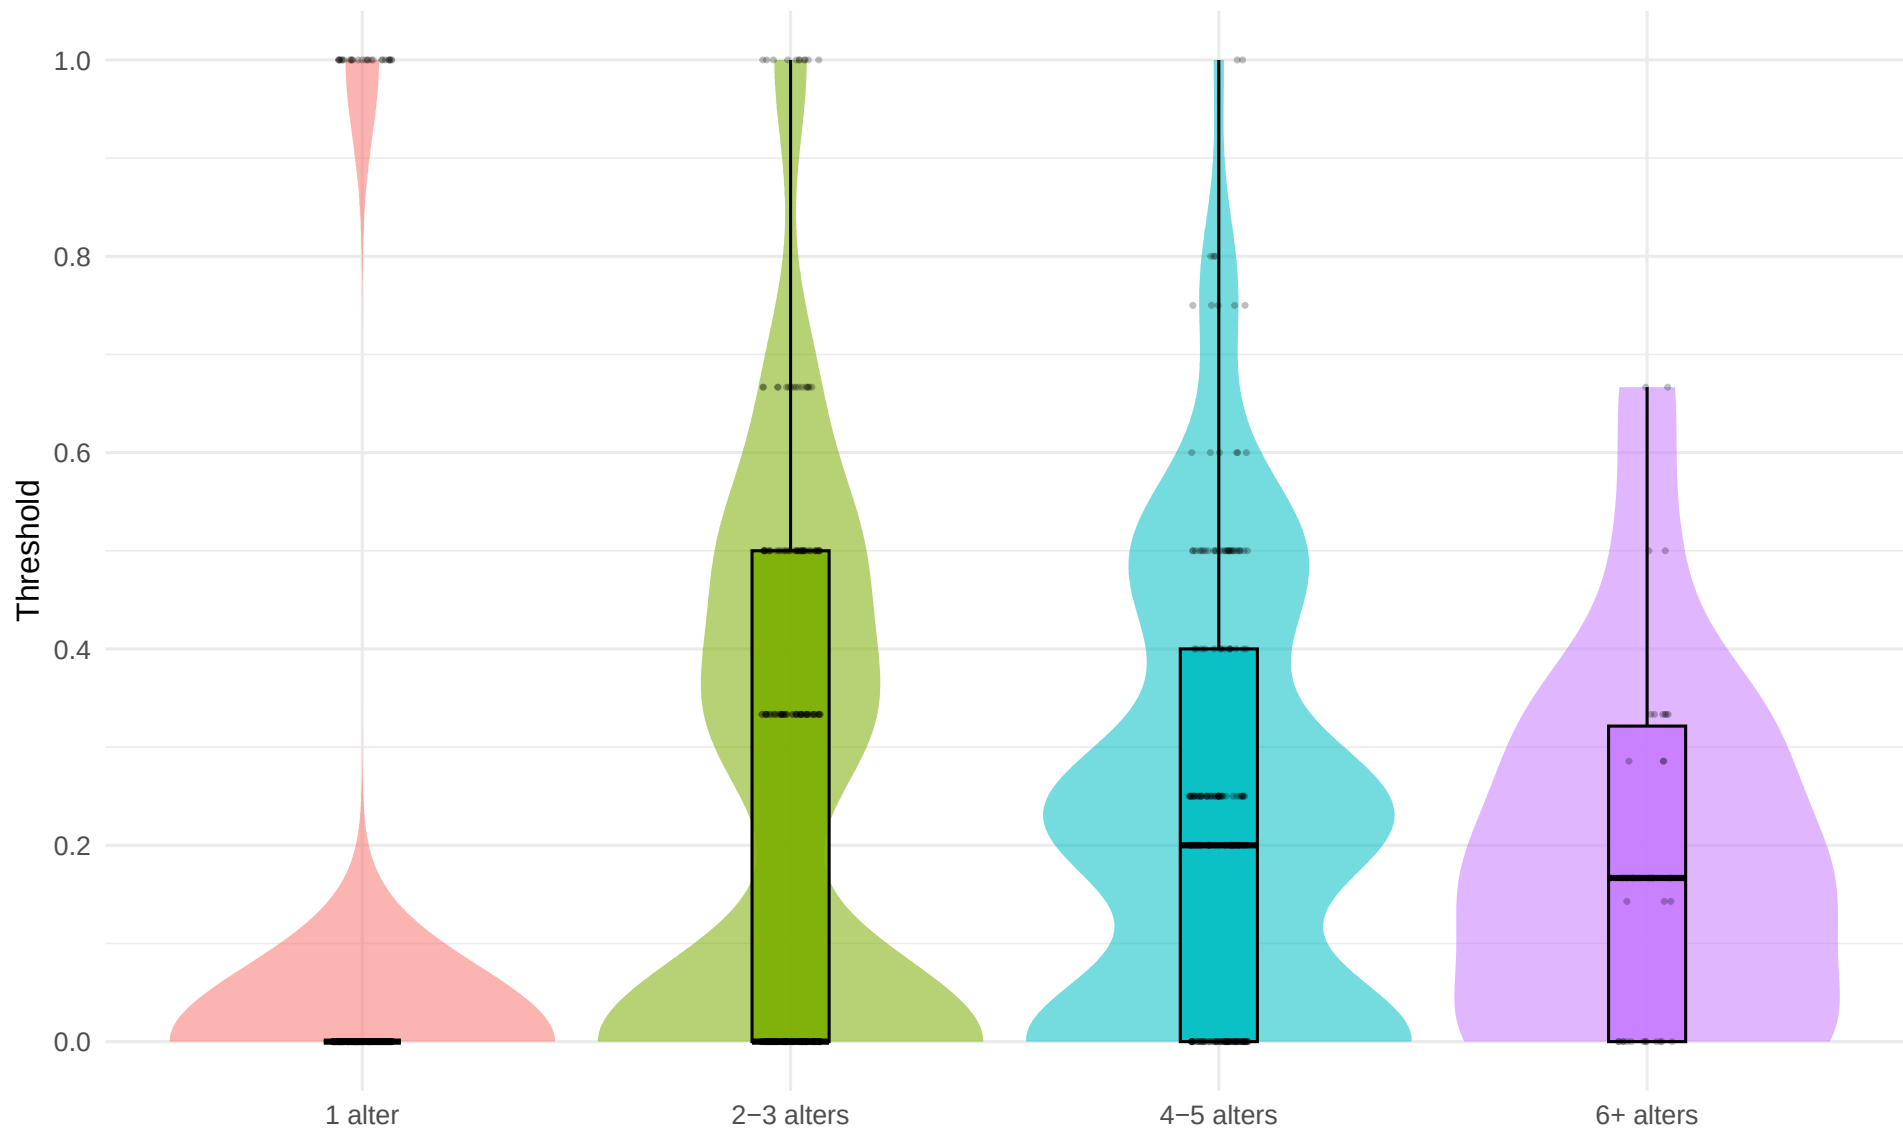

Threshold = k/n is constrained to rational fractions

Grey ticks mark allowed values; coloured by Hispanic

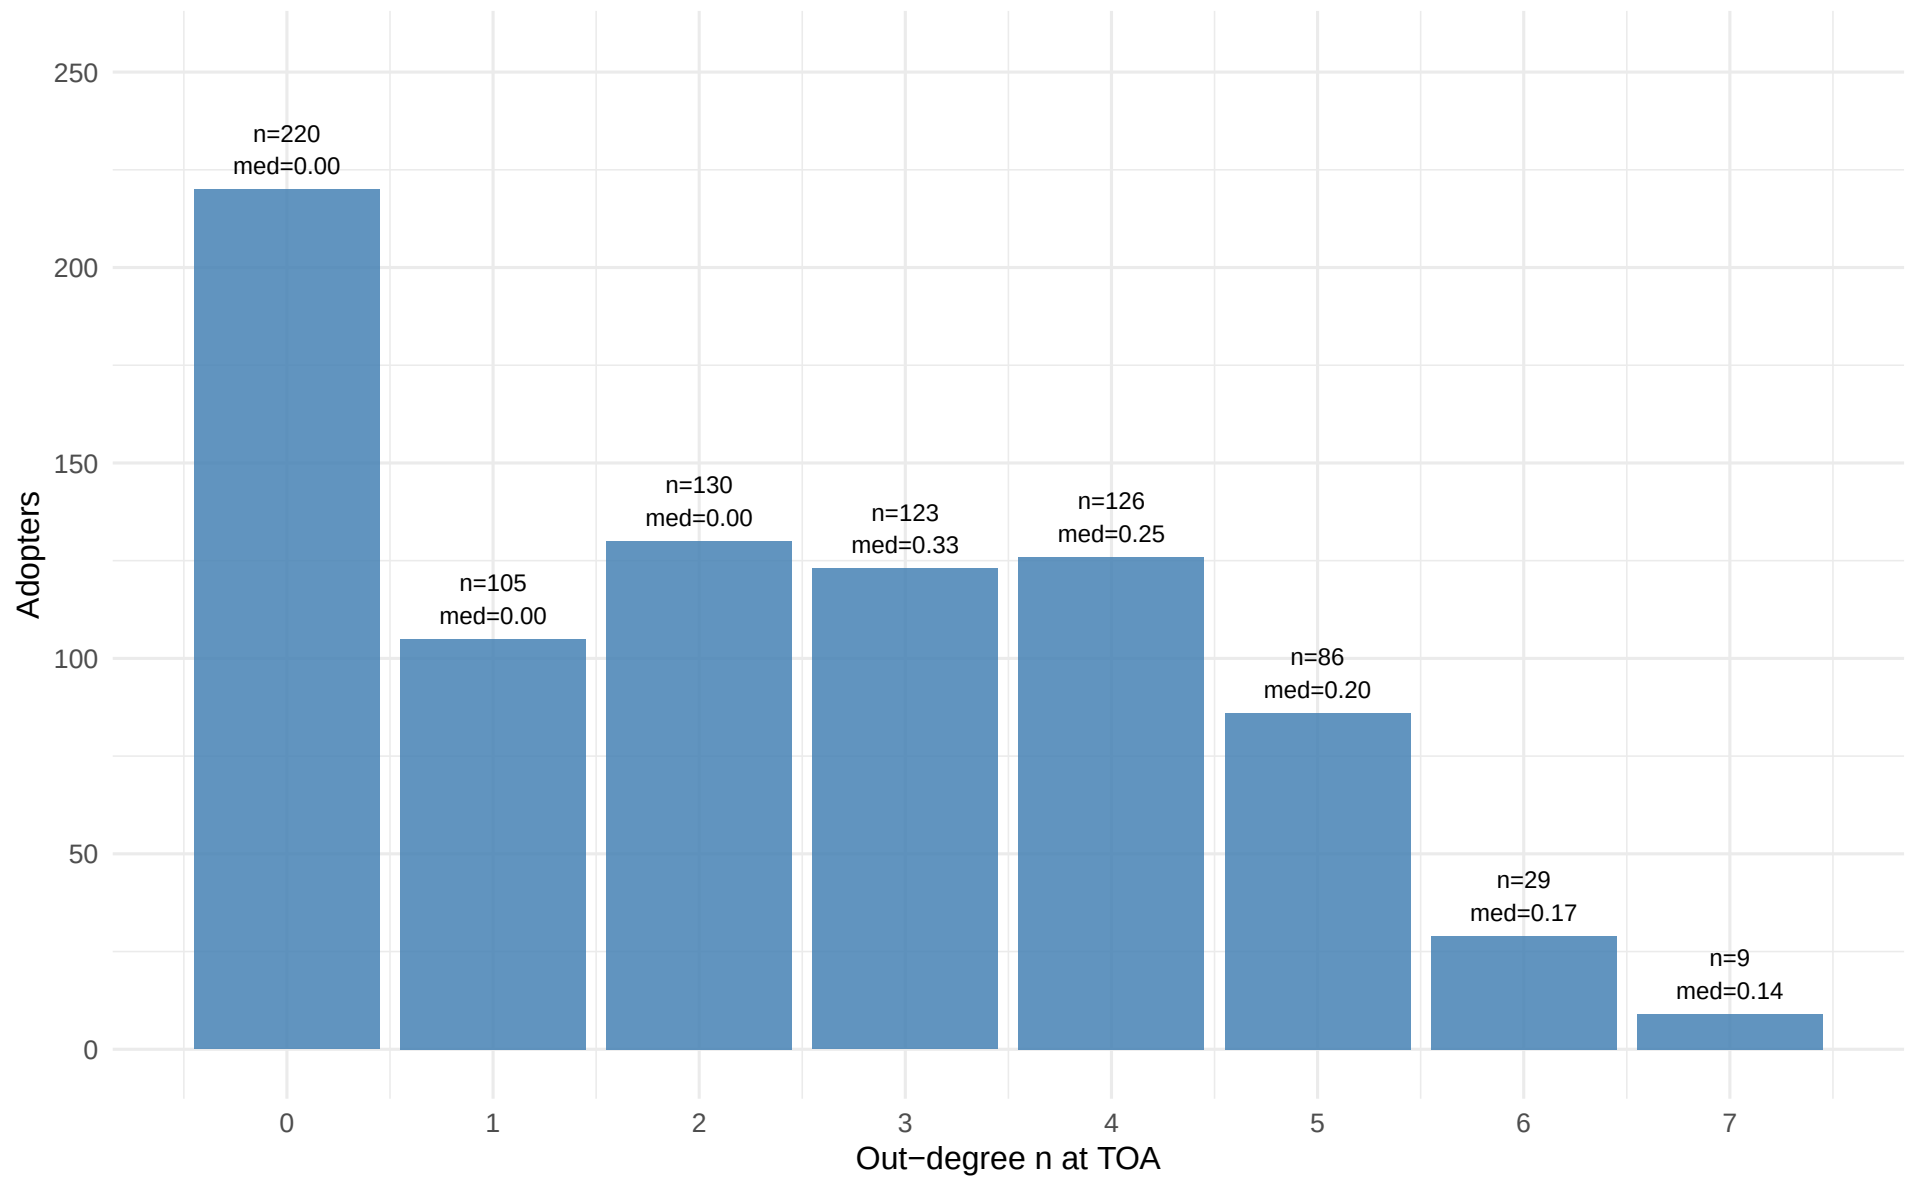

Threshold distribution by degree bin at TOA

Low-degree bins show sharp modes (rational-fraction artefact)

Adopters and median threshold, by out-degree at TOA

Threshold distribution (all adopters, no covariates)

Spikes at 0, $1/4$, $1/3$, $1/2$, $2/3$, 1 = denominator artefacts
